Mini-Project Evaluation Rubrics — 40 Marks

- The mini-project will be evaluated in three Phases.

1. Project Synopsis — 10 Marks (Submission Deadline: On or before Week 8)

- Abstract
- Introduction and motivation
- Literature survey of recent and relevant research papers
- Research gap
- Problem statement
- Project objectives
- Dataset description
- Proposed methodology or workflow
- Expected outcomes
- References

Criterion	**Requirements**	**Marks**
Abstract and Introduction	Clear overview, background, motivation, and significance of the project	2
Literature Survey	Review of at least 10 recent and relevant research papers, preferably from 2023–2026, with proper citations and a comparison table	2
Problem Statement and Objectives	Clearly defined research problem, identified research gap, and specific objectives	2
Dataset Description	Dataset source, number of samples, features, class distribution, and relevance to the problem	2
Proposed Approach	Initial workflow, proposed model/algorithm, and expected outcomes	2
Total		**10**

2. Final Project Report — 15 Marks (Submission Deadline: On or before Week 11)

The Final Project Report must include:

- Abstract
- Introduction and motivation
- Literature survey with a comparative analysis
- Research gap, problem statement, and objectives
- Dataset description and preprocessing
- Proposed methodology and system architecture
- Implementation details
- Experimental results and performance evaluation
- Discussion and result analysis
- Conclusion and future scope
- References
- Plagiarism/similarity and AI-generated content reports

Criterion	**Requirements**	**Marks**
Methodology	Detailed workflow, system architecture, preprocessing, feature engineering, model selection, and evaluation metrics	3
Implementation	Proper explanation of tools, algorithms, experimental setup, training, validation, and testing procedures	2
Experimental Results	Appropriate tables, graphs, performance metrics, and comparison with baseline models	2
Discussion and Inference	Meaningful interpretation of results, strengths, limitations, and connection with the identified research gap	2
Conclusion and Future Scope	Summary of achievements, major conclusions, limitations, and possible extensions	1
Report Quality and Originality	Proper organization, formatting, citations, language, originality, and responsible use of AI tools	5
Total		**15**

3. Project Demonstration and Viva — 15 Marks (Evaluation: On Week 12)

The evaluation will include:

- Implementation and Successful execution of the project
- Demonstration of the complete workflow
- Presentation and analysis of experimental results
- Understanding of the dataset, methodology, and algorithms
- Justification of the selected models and evaluation metrics
- Individual contribution to the project
- Short viva voce based on the complete project work

Criterion	Requirements	Marks
Implementation and Code Quality	Complete, organized, readable, and properly documented code	3
Successful Execution	Correct execution of preprocessing, training, testing, and prediction modules	3
Demonstration of Results	Clear presentation of outputs, graphs, evaluation metrics, and model performance	3
Result Analysis	Ability to explain and justify the obtained results and compare different models	3
Short Viva	Understanding of the problem, dataset, methodology, implementation, and individual contribution	3
Total		**15**

Important Instructions

1. The mini-project report and implementation must be original.
2. Copying from research papers, websites, other groups, or previously submitted projects is strictly prohibited.
3. Excessive or undisclosed AI-generated content is strictly prohibited. AI tools may only be used for limited assistance, subject to the instructor's guidelines.
4. The similarity score must be below **15%**, excluding references and standard technical terminology.

5. Students must submit the following separately:
    - Final project report
    - Similarity/plagiarism report
    - AI-generated content report
6. All figures, tables, equations, datasets, and external code must be appropriately cited.
7. Each student must be able to explain their individual contribution during the viva. Inability to explain the submitted work may result in a substantial reduction of marks.
